

PRESS RELEASE

## **ISCON Imaging Introduces New Whole-Body and Handheld Imaging Products for Loss Prevention and Employee Safety Applications at RILA 2015**

**Woburn, Mass., February 18, 2015** – [ISCON Imaging, Inc.](#), a manufacturer of patented infrared (IR) imaging screening systems, will introduce two new imaging solutions at the 2015 RILA Supply Chain Conference being held Feb. 23-25, 2015, in Orlando, Fla.

ISCON's new solutions are purpose-built for use in loss prevention, security enhancement and asset protection. FocusScan™ is an IR-based handheld imaging technology, and SecureScan™ is a whole-body scanner. Both scanners enable screening of individuals to provide a detailed view of objects hidden under clothing. The systems deliver high-resolution images that allow users to enhance safety and reduce loss while minimizing privacy concerns and eliminating radiation exposure.

At the [RILA Retail Supply Chain Conference](#), being held at the Gaylord Palms Resort & Convention Center, ISCON Imaging will demonstrate the benefits and capabilities of the its new scanning solutions at [booth #315](#). Conference attendees will be able to see first-hand how quickly and easily concealed objects are identified with ISCON's front-line asset protection scanning systems.

"We are eager to add these innovative additions to our product portfolio. The non-invasive whole-body and handheld imaging products provide rapid identification of concealed items, and are designed for use in loss prevention and employee safety applications," said Kathleen Tighe, Director of Sales and Marketing, ISCON Imaging. "The SecureScan whole-body imager delivers fast and safe whole-body screening, while the new FocusScan handheld imager is designed for targeted security screening. Both solutions are engineered to provide exceptional deterrence solutions to retailers and the distribution supply chain."

To schedule a demonstration or appointment at RILA, contact ISCON at [info@isconimaging.com](mailto:info@isconimaging.com).

### **About ISCON Imaging:**

Founded in 2006, ISCON Imaging provides safe, high-resolution, whole-body scanners that quickly identify concealed items without using radiation or violating personal privacy. ISCON's patented thermo-conductive technology combines infrared (IR) and heat transfer for high-resolution imaging. Its robust product portfolio includes the [Mini Portal](#), SecureScan and FocusScan mobile scanners. ISCON Imaging solutions help protect

personnel, products and infrastructure in a variety of markets across the globe. For more information, visit <http://www.isconimaging.com>.
